

MODDABLE CHESS • VARIANT 73 OF 86

Shafran's Hexagonal Chess

70 hexes (9 files a-i)

BOARD

2

PLAYERS

SHAFRAN'S HEXAGONAL CHESS

Invented by Boris Shafran. Played on a smaller 70-hex board with 9 files (a through i). Castling is permitted and the pawn initial step varies by file.

SETUP

Board: 70-hex hexagonal grid, 9 files (a-i).

PAWNS

Pawns capture diagonally (bishop direction, through shared corners). The initial step from the starting rank depends on the pawn's file:

FILES	INITIAL STEP
d, e, f	1, 2, or 3 cells forward
b, c, g, h	1 or 2 cells forward
a, i	1 cell only

CASTLING

Castling is permitted on both the Queen-side and King-side. The King moves two cells toward the Rook; the Rook moves to the other side of the King.

RULES

Identical to standard chess adapted for the hex grid except as noted. Stalemate is a draw.

WIN CONDITION

Checkmate.
