SECTION 1

OVERVIEW

Econopoly is a rebalance mod for Monopoly that introduces dynamic property pricing, progressive taxation, anti-monopoly regulation, bankruptcy reform, and a hard game timer. The result: a tighter, fairer game that ends in 60 minutes instead of 4 hours.

DESIGN GOALS

1. **Fix the runaway leader problem.** Progressive tax bands and anti-monopoly clauses keep the richest player in check.
2. **Eliminate player knockout misery.** Bankruptcy reform gives players 3 turns to recover before elimination.
3. **End the game.** A hard timer ensures no session exceeds 90 minutes. No more family arguments.

SECTION 2

DYNAMIC PRICING

Property prices fluctuate based on how many times they've been landed on. Popular properties become expensive; neglected ones drop in value.

- ♦ **At the start of each round**, update property prices on the tracker sheet.
- ♦ Each landing on a property increases its purchase price by \$50.
- ♦ Properties that go 2 full rounds without a landing decrease by \$50 (minimum: original printed price).
- ♦ Rent is unaffected — only purchase/auction prices change.

WHY THIS WORKS

Dynamic pricing creates genuine market tension. Landing on a hot property costs more — but waiting means someone else buys it first. Early-game property rushes are no longer automatic.

SECTION 3

TAX BANDS

Income tax scales with net worth. The richest player pays the highest rate each time they pass Go.

NET WORTH	TAX RATE	GO INCOME AFTER TAX
Under \$1,000	10%	\$180
\$1,000–\$3,000	20%	\$160
Over \$3,000	35%	\$130

- ♦ Calculate net worth = cash + property values (current dynamic price) + house/hotel values.
- ♦ Tax is applied when passing Go, reducing the \$200 payout.
- ♦ If you land on Income Tax, pay the flat \$200 OR your band percentage of net worth — whichever is lower.

ANTI-MONOPOLY CLAUSE

Owning all properties of one colour triggers a government intervention.

- ♦ When a player completes a colour set, one property from that set is **forcibly auctioned** to the other players on the next turn.
- ♦ The monopoly holder chooses which property to auction.
- ♦ Auction starts at 50% of the property's current dynamic price.
- ♦ The monopoly holder may not bid.

IMPORTANT

Monopolies are powerful but temporary. You can rebuild them — buying back the auctioned property is legal — but each time you complete the set, another auction triggers. Houses/hotels remain on the properties through auction.

SECTION 5

BANKRUPTCY REFORM

Bankrupt players enter “debt mode” for 3 turns before elimination.

- ♦ During debt mode, you can still: trade, sell properties, mortgage, negotiate deals.
- ♦ You cannot: buy new properties, build houses, or collect rent.
- ♦ If you reach \$0+ cash by the end of 3 debt-mode turns, you exit debt mode and resume normal play.
- ♦ If you cannot, you are eliminated.

This prevents early-game knockouts from ruining the experience for any player.

SECTION 6

GAME TIMER

The game ends after **90 minutes** or when **2 players are eliminated**, whichever comes first.

- ♦ When the timer ends, complete the current round (so all players have equal turns).
- ♦ The player with the highest net worth wins.
- ♦ In case of a tie, the player with the most cash (not including property) wins.

No more 4-hour Monopoly marathons.

COMPONENTS

REQUIRED

- ♦ Monopoly base game (any edition)
- ♦ Standard property cards and money
- ♦ All player tokens and dice

PRINTABLE (INCLUDED)

- ♦ Dynamic pricing tracker sheet (PDF)
- ♦ Tax band reference card
- ♦ Debt mode reminder tokens

YOU'LL ALSO NEED

- ♦ 90-minute timer (phone or kitchen timer)
- ♦ Pencil for price tracking each round
- ♦ Calculator for tax band percentages
